

## CONTENTS

<b>Chapter I. Introduction</b>	<b>1</b>
<b>Chapter II. Modular symbol algorithms</b>	<b>7</b>
2.1 Modular Symbols and Homology	7
2.1.1 The upper half-plane, the modular group and cusp forms	7
2.1.2 The duality between cusp forms and homology	9
2.1.3 Real structure	11
2.1.4 Modular symbol formalism	12
2.1.5 Rational structure and the Manin–Drinfeld Theorem	12
2.1.6 Triangulations and homology	13
2.2 M-symbols and $\Gamma_0(N)$	15
2.3 Conversion between modular symbols and M-symbols	18
2.4 Action of Hecke and other operators	18
2.5 Working in $H^+(N)$	23
2.6 Modular forms and modular elliptic curves	24
2.7 Splitting off one-dimensional eigenspaces	25
2.8 $L(f, s)$ and the evaluation of $L(f, 1)/\Omega(f)$	29
2.9 Computing Fourier coefficients	31
2.10 Computing periods I	33
2.11 Computing periods II: Indirect method	37
2.12 Computing periods III: Evaluation of the sums	41
2.13 Computing $L^{(r)}(f, 1)$	42
2.14 Obtaining equations for the curves	45
2.15 Computing the degree of a modular parametrization	46
2.15.1 Modular Parametrizations	47
2.15.2 Coset representatives and Fundamental Domains	48
2.15.3 Implementation for $\Gamma_0(N)$	50
<b>Appendix to Chapter II. Examples</b>	<b>52</b>
Example 1. $N = 11$	52
Example 2. $N = 33$	57
Example 3. $N = 37$	58
Example 4. $N = 49$	60
<b>Chapter III. Elliptic curve algorithms</b>	<b>62</b>
3.1 Terminology and notation	62
3.2 The Kraus–Laska–Connell algorithm and Tate’s algorithm	64
3.3 The Mordell–Weil group I: finding torsion points	68
3.4 Heights and the height pairing	71
3.5 The Mordell–Weil group II: generators	75
3.6 The Mordell–Weil group III: the rank	78
3.7 The period lattice	97
3.8 Finding isogenous curves	98
3.9 Twists and complex multiplication	101
<b>Chapter IV. The tables</b>	<b>104</b>
Table 1. Elliptic curves	109
Table 2. Mordell–Weil generators	255
Table 3. Hecke eigenvalues	264
Table 4. Birch–Swinnerton-Dyer data	313
Table 5. Parametrization degrees	362
<b>Bibliography</b>	<b>374</b>
